AARON HOLMES

BUSINESS SYSTEMS | INTEGRATIONS | AUTOMATION | TECHNICAL IMPLEMENTATION

Michigan (Remote) | 734-489-9849 | aaronholmesdev@gmail.com | aaronholmes.dev | linkedin.com/in/aaronholmesdev

PROFESSIONAL PROFILE

Business systems and technical implementation specialist who connects operational needs to maintainable applications, integrations, and automation. Bridges requirements discovery, hands-on configuration, API troubleshooting, data quality, and user support across healthcare, restaurant SaaS, financial services, and client projects. Brings substantial business-operations leadership and practical product judgment to technical problem solving, vendor relationships, documentation, and adoption.

CORE CAPABILITIES

Business systems & delivery Application ownership · Requirements discovery · Process mapping · Workflow architecture · Solution design · Process improvement · Project/vendor coordination

Data quality & integration CRM data modeling · Field mapping · Normalization · Deduplication · Record validation/reconciliation · Exception handling · Imports/updates

Reliability & support Production troubleshooting · Root-cause analysis · Logs and alerts · Controlled testing · Dependency documentation · Automation cost analysis

Customer & product SaaS onboarding and support · Customer discovery · Product feedback · Usability · Stakeholder communication · Training and technical handoffs

PROFESSIONAL EXPERIENCE

TixWork | SaaS Implementation, Product and Customer Support · Current | Project engagement via Ascend

- Support onboarding, issue triage, maintenance, and customer communications for TixWork, a restaurant-operations SaaS platform used across 100+ locations.
- Apply restaurant operations expertise during product demos and customer discussions to translate maintenance, staffing, and field workflows into useful product requirements.
- Bring operator feedback into feature and usability discussions, helping connect day-to-day product friction with practical workflows and development priorities.
- Investigate support issues with customers and developers, clarify symptoms and expected behavior, and coordinate follow-up in terms operators can understand.
- Contribute to ongoing product maintenance and evolving customer-acquisition and marketing work while supporting existing accounts.

Lincoln Health Supply | Business Systems Automation Engineer · Sep 2025–Aug 2026 | Remote

- Worked with the COO to define operational requirements and built auditable centralized Deluge logic for duplicate detection, branch ownership and supplier routing using a 30-day window and request-status rules. Validated rule combinations with controlled spreadsheet test cases.
- Diagnosed and corrected upstream Zoho Flow branch/owner routing defects after an estimated 500–600 leads were affected over about two months. Added exception alerts and reviewed 300+ new and historical records with leadership during approximately one week of post-fix validation.
- Built a custom multi-endpoint pVerify REST integration in Zapier with bearer-token request authentication, JSON mapping, response normalization and CRM updates. Automated routine eligibility verification, saving an estimated 10 minutes of manual staff effort per record.
- Trained a colleague to independently support Zoho and Zapier automations. Documentation and knowledge transfer contributed to an estimated 10+ hours per week in reduced team troubleshooting, escalation and support effort.
- Served as a primary hands-on technical resource for an inherited environment of 400+ Zoho CRM workflows, about 150 existing Deluge functions and hundreds of Zapier automations across healthcare operations.
- Connected Zoho Survey, Google Sheets, Zoho Flow, CRM, HCPCS/product logic, document generation and order workflows for compression garments across differing intake processes.

AviKaiDo | Business Systems and Automation Consultant · Jan 2019–Sept 2025 | Intermittent project work

- Delivered client websites, CRM workflows, data integrations, and operational automations across financial services, healthcare, publishing, and small businesses, from discovery and implementation through support.
- Built securities-backed lending intake and document workflows for High West Capital Partners, Global Stock Lenders, and International Liquidity Partners, using borrower/ticker data, historical market metrics, loan-to-value rules, and generated deal documents.
- Developed prospecting and referral-support workflows for Global Stock Lenders, aggregating public shareholder and company information for outreach research.
- Prototyped Ask Your Primary pharmacy QR intake and CRM/fax-to-record workflows, including patient-data mapping and document association.
- Implemented automated content-ingestion and rules-based classification workflows for TheRedZone and investigated website caching and application-performance problems.

Ascend Internet Marketing | Web Development, CRM and Client Delivery · Nov 2015–Dec 2018 | Historical client projects

- Delivered web and CRM projects for clients including Schafer Development and Cure Launcher, balancing implementation, troubleshooting, client communication, and ongoing support.
- Contributed to JK&T Wings' custom maintenance-tracking system, an early client solution that later developed into the TixWork SaaS product.
- Clarified business requirements, coordinated developers and vendors, tracked issues and milestones, and guided clients through technical project handoffs.

SELECTED INDEPENDENT WORK AND COMMUNITY INVOLVEMENT

- AI context workspace: architecting a portable, model-agnostic knowledge system with Markdown context routing, project-specific records, and selective retrieval so different AI assistants can reuse consistent context instead of reconstructing prior conversations.
- Offline knowledge migration: designed and tested a local Python/SQLite toolkit for conversation exports, provenance, sensitivity flags, and human review/publishing gates; keeps raw private archives separate from approved knowledge and supports controlled updates.
- FIRST robotics volunteer since 2021, mentoring student design, programming, fabrication, testing, and troubleshooting; supported middle-school FTC Team 8424 in its 2025 Michigan State Championship season.

TECHNOLOGY AND METHODS

Business applications & automation Zoho CRM/One · Zoho Flow · Zoho Survey · Zapier · WordPress · Excel

Connected services & workflows pVerify · PandaDoc · Phaxio · Telnyx · Sinch · Google Sheets · PDF generation · Fax/SMS

APIs, queries & scripting REST APIs · Webhooks · JSON · Bearer tokens · Zoho COQL · Deluge · JavaScript

Development tools (projects) Python · TypeScript · SQL · Node.js · HTML/CSS · Astro · Playwright · BeautifulSoup · Git/GitHub · Linux/WSL · VS Code

Cloud labs & local AI AWS Academy (EC2, RDS, VPC, IAM, S3, Secrets Manager); LM Studio · Local model APIs
